

# Greening of Riddell

## Zone 7

In this area introduced grasses *Phalaris* and *Cocksfoot* compromise the integrity of the native grassland. Spot spray them out or dig them out. Monitor for *Serrated Tussock* south of the escarpment fence. Mow the walking path regularly. Monitor the quarry steps which were de-rusted and painted by Robin Godfrey in 2018.

The western steps were surfaced with gravel in February 2009 and subsequently concreted.

Good Wallaby Grass cover and self-seeded *Clematis microphylla* under *Allocasuarina stricta* in this area.
