

Greening of Riddell

Zone 4

Actions

- Monitor what grows in non-mowing areas, e.g. around the self-seeding silver wattles
- Stake out kangaroo grass -*Themeda triandra* and remnant *Dianella* so it is not mowed
- Keep an eye out for Serrated Tussock and Broom seedlings.
- Weed the May 2018 planting, top up mulch and prune the *Chrysocephalum semipoposum*.

Photograph, above, taken in November 2019 of our May 2018 planting. This area had a widespread periwinkle infestation. It was sprayed out twice, earth moving machinery was contracted to sift the soil, add rocks and rearrange the hillside ready for planting and fencing.

Dianella admixta or *Dianella* sp. aff. *longifolia* (Benambra) - remnant native vegetation in **Area 4** of Wybejong Park.

Dianella amoena—a rare plant that occurs along the railway line in Riddells Creek and along Sandy Creek. We have planted it upstream in our spring 2007 and 2008 plantings.

Acacia implexa –
Lightwood

Murnong Patch,
Microseris scapigera.
work in progress 2021.
